MEDTRONIC, INC. 710 MEDTRONIC PARKWAY NE MINNEAPOLIS, MN 55432-9924			EXAMINER WILSON, LARRY ROSS	
			ART UNIT 3767	PAPER NUMBER
			MAIL DATE 08/26/2009	DELIVERY MODE PAPER

Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Office Action Summary

Application No.

10/803,711

Applicant(s)

KEIMEL ET AL.

Examiner

LARRY R. WILSON

Art Unit

3767

Period for Reply -- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 05 June 2009.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-21, 23-26, 28-34, 44-49, 51, 52 and 54-75 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-21, 23-26, 28-34, 44-49, 51, 52 and 54-75 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 18 March 2004 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.
- Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
- Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☒ Information Disclosure Statement(s) (PTO/SB/08)
Paper No(s)/Mail Date 7/28/2004, 3/7/2006, 6/5/2009.
- 4) ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date _____.
- 5) ☐ Notice of Informal Patent Application
- 6) ☐ Other: _____.

DETAILED ACTION

Election/Restrictions

1. Applicant's election without traverse of the invention of Group I in the reply filed on 5 June 2009 is acknowledged.

Claim Objections

2. Claims 23, 24, 51, and 52 are objected to because of the following informalities: claims depend on previous canceled claims, the subject matter of the canceled claims having been incorporated into the corresponding independent claim. Appropriate correction is required.
3. Claim 54 is objected to because of the following informalities: the amendment appears to be duplicating the "programmable pump" and "programmed delivery rate...at least one neurological disease" of the earlier limitation, (b). Appropriate correction is required.

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 1-6, 8-12, 18-21, 23-26, 28-33, 45-49, 51-52, 54-59, 61-65, and 69-75, are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent 5,814,014 to Dennis D. Elsberry et al. (Elsberry) in view of U.S. Patent 5,433,946 to Howard J. Allen, Jr. et al. (Allen).

In regards to claim 1, Elsberry teaches a system comprising an implantable catheter system (Fig. 1, #22), and a pump (Fig. 1, #10) that pumps said therapeutic protein formulation through said implantable catheter system to at least one targeted

region (col. 3, lines 19-20), wherein the pump provides for a programmable delivery rate of the therapeutic protein formulation (col. 4, lines 32-36), and wherein the delivery rate is selected based on factors selected from the group consisting of specific neurological disease (col. 3, line 66-col. 4, line 3 – shows the sensing of hyperexcitation indicative of neurological disease), genetic sequence of the patient's gene encoding for the protein to be delivered, body weight, and combinations thereof.

But does not teach a therapeutic protein formulation that has been modified for enhanced cellular uptake properties.

Allen teaches a therapeutic protein formulation that has been modified for enhanced cellular uptake properties (col. 3, lines 45-51, col. 4, line 46-47).

It would have been obvious to one of ordinary skill in the art at the time the invention was made to have included the therapeutic protein formulation of Allen in the system of Elsberry in order to reduce therapeutic protein loss to clearance and inactivation (col. 1, lines 48-51, 62-64) as taught by Allen.

In regards to claim 28, Elsberry teaches a system comprising a means of physically bypassing the blood-brain barrier, via an implantable catheter system (Fig. 1, #22), and a pump (Fig. 1, #10) that pumps said therapeutic protein formulation through said implantable catheter system to at least one targeted region (col. 3, lines 19-20), wherein the pump provides for a programmable delivery rate of the therapeutic protein formulation (col. 4, lines 32-36) and wherein the delivery rate is selected based on factors selected from the group consisting of specific neurological disease (col. 3, line 66-col. 4, line 3 – shows the sensing of hyperexcitation indicative of neurological disease), genetic

sequence of the patient's gene encoding for the protein to be delivered, body weight, and combinations thereof.

But does not teach a means of providing for a therapeutic protein formulation that facilitates cellular uptake of proteins within said formulation.

Allen teaches a means of providing for a therapeutic protein formulation that facilitates cellular uptake of proteins within said formulation (col. 3, lines 45-51, col. 4, line 46-47).

It would have been obvious to one of ordinary skill in the art at the time the invention was made to have included the therapeutic protein formulation of Allen in the system of Elsberry in order to reduce therapeutic protein loss to clearance and inactivation (col. 1, lines 48-51, 62-64) as taught by Allen.

In regards to claim 54, Elsberry teaches a system comprising an implantable catheter system (Fig. 1, #22) comprising a programmable pump (Fig. 1, #10) to physically deliver said therapeutic protein formulation across the blood-brain barrier at a programmed delivery rate (col. 4, lines 32-36) for the purpose of treating patients diagnosed with at least one neurological disease of the central nervous system (abstract), a pump (Fig. 1, #10) that pumps said therapeutic protein formulation through said implantable catheter system to at least one targeted region (col. 3, lines 19-20), wherein the pump provides for a programmable delivery rate of the therapeutic protein formulation (col. 4, lines 32-36), and wherein the delivery rate is selected based on factors selected from the group consisting of specific neurological disease (col. 3, line 66- col. 4, line 3 – shows the sensing of hyperexcitation indicative of neurological disease),

genetic sequence of the patient's gene encoding for the protein to be delivered, body weight, and combinations thereof.

But does not teach a therapeutic protein formulation.

Allen teaches a therapeutic protein formulation (col. 3, lines 45-51, col. 4, line 46-47).

It would have been obvious to one of ordinary skill in the art at the time the invention was made to have included the therapeutic protein formulation of Allen in the system of Elsberry in order to reduce therapeutic protein loss to clearance and inactivation (col. 1, lines 48-51, 62-64) as taught by Allen.

In regards to claims 2-6, 8-12, 18-21, 23-26, 29-33, 45-49, 51-52, 55-59, 61-65, 69-75, Elsberry, as modified by Allen, teaches the system of claims 1, 28, and 54, and further teaches:

Claims 2, 29, 55: the neurological diseases treated are selected from the group consisting of lysosomal storage diseases, protein deficiency diseases, enzyme deficiency diseases, inborn errors of metabolism, neurodegenerative diseases (col. 2, lines 19-21), and combinations thereof;

Claims 3, 30, 56: said neurological diseases are inborn errors of metabolism selected from the group consisting of mucopolysaccharidosis (Allen Table 1, line 32);

Claims 4, 31, 57: said neurological diseases are selected from the group consisting of Fragile X Syndrome, Parkinson's disease (Elsberry col. 2, line 20), Alzheimer's disease, and combinations thereof;

Claims 5, 32, 58: the therapeutic protein formulation comprises enzymes providing for enzyme replacement therapy (Allen col. 1, lines 38-42);

Claims 6, 33, 59: the enzymes are selected from the group consisting of alpha-L-iduronidase (Allen Table 1, line 32);

Claims 8, 61: wherein at least some of the proteins within said therapeutic protein formulation have been modified to comprise a transport aid (Allen col. 4, lines 44-47);

Claims 9, 62: said modified proteins have been modified by incorporating into their structure amino acid sequences providing for an intrinsic transport aid (col. 4, lines 44-47);

Claims 10, 63: said modified proteins are fusion proteins (col. 4, lines 44-47 – by conjugating one is also fusing two proteins together into one peptide);

Claims 11, 64: said modified proteins have been modified by conjugation to a transport aid that facilitates the cellular uptake of said therapeutic protein (col. 4, lines 44-47);

Claims 12, 65: the transport aid comprises at least a portion of a species selected from the group consisting of recombinant human melanotransferrin, p97, tetanus toxin fragment C, endogenous lectins (Allen col. 4, lines 61-64), biotin, and combinations thereof;

Claims 18, 45, 69: implantable catheter system is implanted so as to deliver said therapeutic protein formulation to intracerebroventricular (Elsberry col. 2, lines 29-32);

Claims 19, 70: further comprising an inlet (Fig. 12, #14);

Claims 20, 48, 71: further comprising a reservoir (Elsberry col. 3, lines 17-20);

Claims 21, 49, 72: said reservoir is implantable and refillable (col. 3, lines 15-20);

Claims 23, 51, 73: the pump comprises an integrated reservoir (col. 3, lines 15-20 – implies an integrated reservoir for the inlet 14 to connect to something);

Claims 24, 52, 74: said pump is implantable (Elsberry col. 2, lines 19-22);

Claim 25, 46, 75: the implantable catheter system comprises at least one branched catheter permitting delivery to at least two separate regions using one primary catheter line (Elsberry col. 3, lines 47-51);

Claim 26, 47: the branched catheter is bifurcated (col. 3, line 47 – "divided into twin tubes" implies a bifurcation).

6. Claims 7, 16, 17, 34, 44, 60, and 68 are rejected under 35 U.S.C. 103(a) as being unpatentable over Elsberry, as modified by Allen, as applied to claims 1, 28, and 54 above, and further in view of U.S. Patent 6,015,572 to Leu-Fen H. Lin et al. (Lin).

In regards to claims 7, 34, and 60, Elsberry, as modified by Allen, teaches the system of claims 1, 28, and 54, but does not teach the therapeutic protein formulation comprises proteins selected from the group consisting of GDNF, FMRP, and combinations thereof.

Lin teaches the therapeutic protein formulation comprises proteins selected from the group consisting of GDNF (col. 1, lines 25-27), FMRP, and combinations thereof.

It would have been obvious to one of ordinary skill in the art at the time the invention was made to have included the GDNF proteins of Lin in the system of Elsberry, as modified by Allen, in order to treat nerve damage and related diseases (col. 1, lines 25-27) as taught by Lin.

In regards to claims 16, 17, 44, and 68, Elsberry, as modified by Allen, teaches the system of claims 1, 28, and 54, but does not teach said therapeutic protein formulation has been formulated to help maintain the integrity and activity of the protein formulation; the integrity and activity of the protein formulation is achieved by the addition to said therapeutic protein formulation, at least one species operable for maintaining a desired pH.

Lin teaches said therapeutic protein formulation has been formulated to help maintain the integrity and activity of the protein formulation; the integrity and activity of the protein formulation is achieved by the addition to said therapeutic protein formulation, at least one species operable for maintaining a desired pH (col. 19, lines 50-64).

It would have been obvious to one of ordinary skill in the art at the time the invention was made to have further included the pH maintaining excipients of Lin in the system of Elsberry, as modified by Allen, in order to provide a "physiologically-compatible, slow-release formulation" (col. 19, lines 50-52) as taught by Lin.

7. Claims 13-15, and 66-67 are rejected under 35 U.S.C. 103(a) as being unpatentable over Elsberry, as modified by Allen, as applied to claims 1 and 54 above, and further in view of U.S. Patent Application 2003/0129186 to Richard Beliveau et al (Beliveau).

In regards to claims, 13-15, and 66-67, Elsberry, as modified by Allen, teaches the system of claims 1 and 54, but does not teach the conjugation comprises a linker species existing between said therapeutic protein and said transport aid; said linker is selected from the group consisting of peptide linkages, disulfide linkages, and combinations thereof; said linker is a streptavidin-biotin complex.

Beliveau teaches the conjugation comprises a linker species existing between said therapeutic protein and said transport aid (para. 26); said linker is selected from the group consisting of peptide linkages, disulfide linkages, and combinations thereof (para. 26); said linker is a streptavidin-biotin complex (para. 189).

It would have been obvious to one of ordinary skill in the art at the time the invention was made to have included the linker species of Beliveau in the system of Elsberry, as modified by Allen, in order to modulate blood-brain barrier transport (abstract) as taught by Beliveau.

Double Patenting

8. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the “right to exclude” granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

9. Claims 1, 2, 4, 28, 29, 31, 54, 55, and 57 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claim 1 of U.S. Patent No. 5,814,014. Although the conflicting claims are not identical, they are not patentably distinct

from each other because the claim requires the structural features of the instant application which are a pump, a catheter capable of delivering a therapeutic dosage, a sensor for generating a signal related to an attribute of the nervous system, and control means responsive to signal generated. One of ordinary skill, would have found it obvious to substitute drugs for protein formulations and proteins are known to influence the excitation response of neurons, e.g. glutamate.

10. Claims 1, 2, 4, 24, 28, 29, 31, 52, 54, 55, 57, and 74 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1, 3, and 11 of U.S. Patent No. 6,056,725. Although the conflicting claims are not identical, they are not patentably distinct from each other because similar structure is recited for treating Alzheimer's, a pump, a source of indomethacin, a catheter connected to the pump into the hippocampus or lateral ventricle, and the pump adapted for subcutaneous placement. The present invention does not require the adjustable catheter, it requires a catheter, thus one of ordinary skill would have found it obvious to make the catheter adjustable in order to provide treatment to a larger population of patients.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to LARRY R. WILSON whose telephone number is (571)270-5899. The examiner can normally be reached on Monday-Thursday 7:00 AM - 5:30 PM (EST).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Kevin C. Simons can be reached on 571-272-4965. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
